

ANTIBACTERIAL AND ANTI-VIRUS VARNISH

MORE THAN **99%** EFFECTIVENESS

ANTYVIR varnish

– a bioactive layer which prevents transmission of bacteria and viruses from the printed surface, increasing safety of use.

KILLS UP TO
99.92% OF
SARS-COV-2
VIRUS

ANTI
BACTERIAL
FORMULA

SAFE AND RELIABLE BARRIER AGAINST VIRUSES MORE THAN **99%** OF EFFECTIVENESS

Packaging with a new generation ANTYVIR varnish helps to protect against growth of microorganisms and transmission of infections after direct contact with packaging. A bioactive layer of the varnish effectively and continuously reduces growth of bacteria and viruses.

GUARANTEE OF SAFETY & SECURITY:

CERTIFICATE 9500ANTIVIR | CERTIFICATE OF ANALYSIS 14844 AKOMEX SP. Z O.O. – 181120

PROPERTIES:

- ANTYVIR varnish kills up to 99.96% of staphylococcus aureus bacteria and up to 99.97% of E. coli bacteria
- It is intended for printing easily absorbable surfaces which are in indirect contact with food
- Durability of up to 1 year
- Confirmed effectiveness in an independent microbiological test, consistent with ISO 20743:2013
- Antibacterial properties are activated by light and air
