

AKOMEX Group

An ecological solution in Akomex offer

Skin trays

are characterized by reduced plastic content with maintenance of special barrier properties. A carton printed on both sides is the base of the tray. Its upper part is additionally laminated with a special foil which may be suitable for contact with food.

Pro-ecological solution

Double-sided print

Extended freshness of food

Euro-slot

Reduced plastic content

Size and shape adapted to customer needs

AKOMEX Group

Application

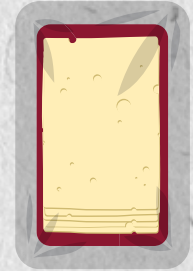

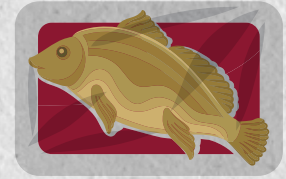

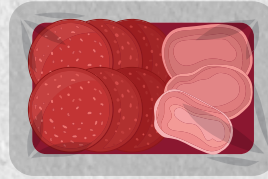

Meat

Fish

Cheese

Thanks to the use of selected materials and low-migration paints, skin trays are dedicated to the food sector. Their barrier properties extend freshness and storage time of food and certificates obtained by Akomex Group are a guarantee of their safety.

PACKAGING friendly to the environment

Eco-solution - MINIMIZATION OF RECYCLING FEES

The carton used for production of skin trays comes from renewable sources. Thanks to the well-thought-of construction, the amount of used plastic and petrochemical materials in the final package is considerably lower. An important aspect is also the fact that the target user (after using the product) can easily separate the foil from the carton and put both components in proper containers for segregation of waste.

- 75% less plastic in final packaging
- Carton from sustainable sources
- Easy separation of the plastic layer is conducive for recycling
- Lower petroleum-derived raw material consumption
- Savings in transport and storage
- Lower energy consumption
- Extended freshness of a product
