Nata Box

CONICAL
ECO TRAYS
FOR FOOD
INDUSTRY

Even up to
90%
less plastic

WITH FOOD PRODUCERS IN MIND

The NataBox cardboard conical trays are a solution dedicated to producers which are seeking better, greener and safer alternatives to their products. Surface of the trays is covered with a special lipophobic and hydrophobic barrier, thanks to which they maintain their full functionality and it is possible to keep humid or fat products therein.

FULL FUNCTIONALITY

The change of the raw material from plastic to solid cardboard guarantees that all functionalities of the original tray are maintained.

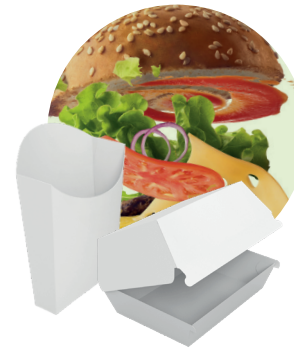

NataBox trays are still characterised by:

- non-penetration of fats and water through their surface,
- **durable structure (glued patches)** and
- perfect protection of a food product.

ECOLOGICAL CHOICE

The NataBox cardboard conical trays are made of material suitable for recycling and form an ideal part of the idea of sustainable development.

They allow to achieve business goals with full responsibility for nature and future generations.
