Innovative packaging for
**THE CONFECTIONERY
INDUSTRY**

AKOMEX PACKAGING success tastes sweet

We have been advising clients for almost 30 years. We help optimize the cost of packaging and logistics. We provide comprehensive packaging solutions – one stop shop. Thanks to a diversified supplier base we have permanent access to a wide range of standard and alternative raw materials and components.

We only use certified, verified and approved raw materials and components.

SOLID CARDBOARD PACKAGING

Solid cardboard packaging made of: virgin fibre cardboard, recycled or kraft board.

Multicolor
offset printing

Range of weights
from 180
to 700 g/m²

Packaging with
a fat and water
barrier for direct
contact with food

Multi-point gluing of packaging (up to 6 points):

- complex constructions with additional pockets and walls
- product protection solutions
- alternatives for rigid box packaging

Gluing machines are equipped with code readers for automatic product control and glue trail verification modules.

CONICAL NATABOX TRAYS - AN ECOLOGICAL ALTERNATIVE FOR THE CONFECTIONERY INDUSTRY

Cardboard NataBox trays are a solution for producers looking for better, more ecological, and safe alternatives to their products. The surface of the trays is covered with a special lipophilic and hydrophobic barrier, thanks to which they retain their full functionality and offer the possibility of storing moist or greasy products.

- alternative to popular PP/PET trays
- custom made, tailored to the market
- guaranteed safety in contact with food
- barrier for protecting the tray against grease and moisture
- highly aesthetic packaging
- possibility of double-sided printing
- product suitable for recycling

WRAPPERS AND PAPER BANDS

A system consisting of an unprinted film and a paper banderole. This ecological solution works perfectly for ice cream packaging. Thanks to this structure, much less plastic is used and the packaging retains its rigidity. Excellent graphic quality is guaranteed by offset printing technology.

OFFSET
PRINTING

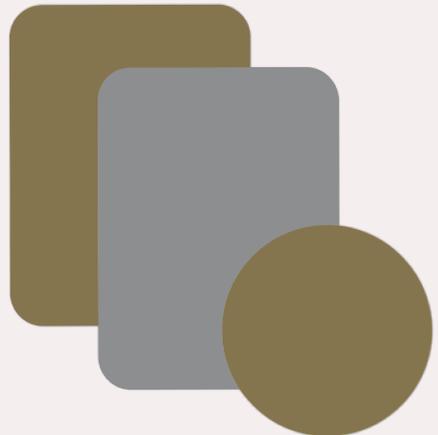

LESS
PLASTIC

LAMINATED CAKE TRAYS

They allow to preserve the taste, nutritional and aesthetic qualities of confectionery products. They comply with restrictive norms concerning products that come in contact with food: the most recognized certificate in the industry - BRC/IoP (British Retail Consortium and Institute of Packaging). They are characterized by high resistance to moisture and grease. Storage both in room temperature, as well as a refrigerator or freezer.

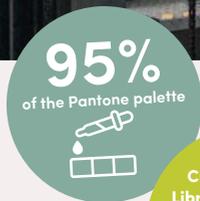

- Laminated sheets for tray production
- Trays with or without printing
- Trays based on recycled paper and virgin fibers with PET or BOPP lamination
- Trays with multicolor or transparent lamination
- Trays with metallic or non-metallic lamination (Metal Free)

INNOVATIONS IN PACKAGING PRODUCTION AKO 7COLOR - NEW PRINTING TECHNOLOGY

Ako 7Color is a modern solution which receives greater and greater recognition amongst customers of Akomex Group. It makes it possible to print in a technology of extended color gamut which adds three additional colors to CMYK (violet, green and orange). Thanks to it, it considerably extends the CMYK standard color space for offset print. It allows to perfectly project 95% of the Pantone palette, using only 7 colors!

INNOVATIONS IN PACKAGING PRODUCTION ECOLOGICAL BARRIER SOLUTIONS

Akomex Group has extensive experience in alternative barrier solutions for bakery, confectionery, and foodservice packaging. Environmentally friendly barrier solutions are also a way to meet consumer expectations. The end user not only has an easier task in terms of recycling, but also has the satisfaction of supporting a closed-loop economy.

Safe in contact with food

Full recyclability (paper, cardboard)

Fossil raw material free

Reduction of carbon footprint

Biodegradability

Lower product charges

KILLS UP TO
99.92%
OF
SARS-COV-2

INNOVATIONS IN PACKAGING PRODUCTION ANTIVIR VARNISH - CONSUMER SAFE PACKAGING

Packaging with a new generation ANTYVIR varnish helps to protect against growth of microorganisms and transmission of infections after direct consumer contact with packaging.

Safe and reliable barrier against viruses
- more than 99% of effectiveness.

ANTIBACTERIAL
FORMULA

INNOVATIONS IN PACKAGING PRODUCTION DIGIMARC - INNOVATIVE TECHNOLOGY AT AKOMEX GROUP

DIGIMARC is a digital watermark which can be put on the entire packaging. It is practically unnoticeable for an eye. It has all functionalities of a classic barcode, but it guarantees completely new possibilities in terms of logistics, communication with a customer or recycling. The Akomex Group is on the official list of recommended Digimarc partners.

REFINEMENTS AND FINISHES

We offer a variety of refinement methods that will make any confectionery product stand out on the shelf.

EMBOSSING & DEBOSSING

INTERNAL LAMINATION

BRILLE TEXT APPLICATION

HOT FOIL STAMPING

VARNISHING

HOLOGRAM APPLICATION

QUALITY AND SUSTAINABILITY

We undertake many activities to reduce the negative impact of our facilities on the environment. We have also been awarded a silver medal by EcoVadis, a leading global rating agency, for our corporate social responsibility and environmental commitment activities.

OUR ASSETS

- We provide short LT for repetitive production, as well as new implementations
- Thanks to implemented Business Continuity Plan we guarantee to maintain supply chains
- We use an individual approach and adaptive cooperation model tailored to customers' requirements and goals
- Supply chain directions to 17 countries in Europe
- Multi-lingual team is ready to support customers from various regions

High quality

Flexible and short lead times

Tailored approach

Sustainability and responsibility

Competitive pricing
