

# Labels that work up an appetite

Ideal for the food industry

# AKOMEX LABELS

Ideal for the food industry

At the Akomex Group, we understand that brands and products should evoke a sensation of desire. Therefore, we create unique and attractive labels that appeal to the senses and attract consumers. Let Akomex labels satisfy your sales appetite too!

- Flexo technology
- Labels produced on a silicone or foil base
- Labels produced on paper or foil
- Full color print, including with UV inks, up to 8 colours in one pass
- Scrollers with electronic systems for 100% control of in-line printing
- Lines for printing and scrolling
- Individually numbered on request
- Standard and non-standard formats and sizes

# FLEXO TECHNOLOGY

Are you looking for a solution that guarantees excellent color replication, attractive price, and a capacity for large-scale production? Consider flexographic print of labels on a roll. Labels printed with this method are of the highest quality and are uniform in terms of patterns and colors.

Uniform patterns  
and colors

# PRINT IN FULL COLOR SCHEME

also with UV inks, up to 8 colors in one pass

Looking for a solution that saves time and production costs, while allowing you to produce large volumes quickly and accurately? Full color printing is the preferred option. This means that the printer is able to apply 8 different ink colors on paper within a single print run. UV inks, which harden after exposure to UV light, can also be used in this process.

Time savings

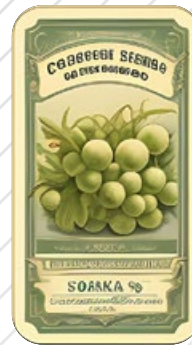

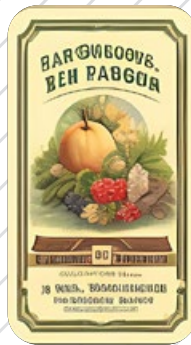

Cost savings

Precision printing

## LABELS PRODUCED ON A SILICONE OR FOIL BASE

If you are looking for an effective and easy-to-apply product identification tool, choose multilayer labels. They consist of an outer material (i.e. a printed layer), an adhesive and carrier layer, which serves as the base with a silicone or foil layer. Such labels are produced on a roll (so-called roll labels).

Easy identification of products

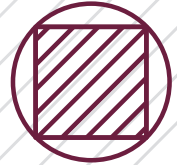

Multilayer label

# 100% IN-LINE PRINT CONTROL

Our scrollers are equipped with 100% in-line electronic print control systems for checking the quality of the print in real time. This way, we can detect and correct errors before the printed paper or film is further processed into packaging.

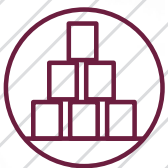

100% print control

Maintaining production continuity

## LINES FOR PRINTING AND SCROLLING

Our state-of-the-art printing and scrolling lines ensure high efficiency, precision and quality in the label production process. These are specialized devices that consist of several segments. They allow efficient printing, processing and preparation of printed materials for further processing or distribution.

Production efficiency

Precision printing

High quality

# PROTECTING CONSUMERS AND THE ENVIRONMENT

We know that brands and products wish to meet the ecological challenges of the modern world. That's why we create our labels with a sense of responsibility for future generations. Akomex Group's progressive solutions:

- Eco-friendly inks
- Clean and environmentally safe production technology
- Eco-friendly raw material with FSC and PEFC certification

# ORGANIC

## OUR POTENTIAL

- More than 200 million labels per year
- Label sizes in production: 280 mm wide and 412 mm high
- Print in Pantone colors - color reproducibility guaranteed every time

# YOUR PRODUCT IS ALWAYS OUR PRIORITY

Our labels serve as reliable protectors, always ready to meet your requirements. We use technological solutions that guarantee:

- water resistance
- grease resistance
- resistance to temperature changes
- anti-counterfeiting features

## Our portfolio spans a wide range of sectors

- Cosmetics
- Pharmaceuticals
- Consumer electronics
- Automotive
- Construction
- Household chemicals
- Industrial products
